Contents

1. General introduction 8

I

Assessment of sedentary behaviour and physical activity

2. Instrumented measures of sedentary behaviour and physical activity are associated with mortality in community-dwelling older adults: a systematic review, meta-analysis and meta-regression analysis. 18
3. The association of objectively measured physical activity and sedentary behavior with skeletal muscle strength and muscle power in older adults: a systematic review and meta-analysis. 54
4. Instrumented assessment of physical activity is associated with muscle function but not with muscle mass in a general population. 74

II

Assessment of nutritional status

5. The prevalence of malnutrition according to the new ESPEN definition in four diverse populations. 90
6. Is being malnourished according to the ESPEN definition for malnutrition associated with clinically relevant outcome measures in geriatric outpatients? 102

III

Assessment of muscle status

- | | | |
|----|--|-----|
| 7. | Distinct trajectories of physical performance across nine years in 60- to 70-year old adults. | 114 |
| 8. | Robustness of in-lab and daily-life gait speed measures over one year in high functioning 61- to 70-year old adults. | 134 |

IV

Assessments of sedentary behaviour, physical activity, nutritional status and muscle status in clinical practice

- | | | |
|-----|---|-----|
| 9. | Determinants of instrumented sedentary and physical activity behaviour in geriatric rehabilitation inpatients: RESORT. | 152 |
| 10. | Patterns of instrumented sedentary behaviour and physical activity and their association with changes in physical and functional performance in geriatric rehabilitation inpatients: the RESORT Ending PyJama Paralysis campaign. | 174 |
| 11. | General discussion
English summary | 202 |
